

UWM Code Review Checklist

The Why

Ensure that you are following all the steps on the code review checklist anytime you are reviewing a Pull Request (PR). Effective immediately, all pull requests that result in an EROC will undergo a review to ensure adherence to this standard.

Continued non-compliance may result in revocation of approval privileges.

To ensure compliance there will be a required training once a year.

The PR description explains the What and Why of the change.

The PR is not too large.

The code is well-designed.

Consider how errors are handled and if they are handled optimally.

The functionality is good for the users of the code.

Any UI changes are sensible and look good.

Any parallelism is done safely.

The code isn't more complex than it needs to be.

The developer isn't implementing things they might need in the future but don't need now.

Code has appropriate unit, integration, and end to end tests.

Tests are well-designed.

The developer used clear names for everything.

Comments are clear and useful, and explain why instead of what.

Code is appropriately documented, generally in XML Comments, Readme, OpenAPI, KB.

The code conforms to the appropriate style guides.

I have read every line of code in the PR.

I will do my best to review code changes and will not rubber stamp PRs.
